

CHESAPEAKE BAY PRESERVATION AREAS INTERIM GUIDANCE MAP

LEGEND

Resource Protection Areas (RPAs)

Existing RPAs adopted March 22, 1993 (1)

New RPAs delineated around perennial streams identified by field surveys (2)

New RPAs delineated around perennial streams estimated from field survey data (3)

Resource Management Areas (RMAs)

Notes:

- (1) RPAs adopted by the Fairfax County Board of Supervisors on March 22, 1993 (effective July 1, 1993) and revised on March 21, 1994.
- (2) New RPAs delineated around water bodies with perennial flow in accordance with the revised Chesapeake Bay Preservation Ordinance. Upstream limits of perennial streams were identified during stream mapping field surveys conducted by the Department of Public Works and Environmental Services (DPWES). Stream mapping field surveys were completed for the following watersheds Cub Run, Horsepen Creek, Little Hunting Creek, Popes Head Creek and the majority of Difficult Run.
- (3) New RPAs delineated around water bodies with perennial flow in accordance with the revised Chesapeake Bay Preservation Ordinance. Stream mapping field surveys have not been completed for these watersheds. Upstream limits of perennial streams were estimated based on the median drainage area of perennial streams identified by field surveys. These RPAs will be revised after actual field data is collected by DPWES during 2003.
